Total Program Assets:	20.29 Million as of 12/31/2025
Beta:	0.99 BARRA [®] predictive beta as of 12/31/2025

NOTES ON INVESTMENT PERFORMANCE

This document must be preceded or accompanied by a current prospectus, which includes information on the investment objective, charges, fees and risks.

Performance results are average annual total returns (year-to-date performance is not annualized) at the contract level. The performance reflects reinvestment of dividends and capital gains and is net of and is net all recurring and non-recurring charges. The Annual Operating Expense Ratio is netted in determining investment performance and includes the maximum Program Expense Charge, Administration Fee, Investment Management Fees, Other Expenses, 12b-1 Fees, and Acquired Fund Fees & Expenses (Underlying Portfolio). All of the fees listed above except for the Program Expense Charge are reflected in the fund's net asset value each day. Therefore they reduce the investment return of each fund. The Program Expense Charge is deducted in units from participants' accounts on a monthly basis and is determined on a plan basis according to a tiered schedule. Please refer to the prospectus for a complete description of the fees and expenses. "Inception Date" is the date that the portfolio was first offered to participants

The rates of return for the portfolios may be compared with the returns of market indices, which have been adjusted to reflect the reinvestment of dividends and income. Indices, unlike portfolios, are not managed and do not reflect investment, transaction or operating costs. You can not invest directly in an index. The Russell Midcap[®] Growth Index measures the performance of those Russell Midcap companies with higher price to book ratios and higher forecasted growth values. Beta is a measure of a portfolio's sensitivity to market movements. A portfolio with a beta greater than 1 is more volatile than the market, and a portfolio with a beta less than 1 is less volatile than the market. Investments in small/mid cap companies may involve greater risks than investments in larger, more established issuers because they generally are more vulnerable than larger companies to adverse business or economic developments. Such companies generally have narrower product lines, more limited financial resources and more limited markets for their stock as compared with larger Interest Rate Risk applies to fixed income securities. Fixed income securities will decline in value because of changes in interest rates. When interest rates rise, the value of a portfolio's debt securities generally declines. When interest rates decline, the value of a portfolio's debt securities generally rises. In general, stocks and other equity security values fluctuate, and sometimes widely fluctuate, in response to changes in a company's financial condition as well as general market, economic and political conditions. Investments in foreign securities, including depository receipts, involve risk not associated with investing in U.S. securities. Foreign markets, particularly emerging markets, may be less liquid, more volatile and subject to less government supervision than domestic markets. Differences between U.S. and foreign legal, political and economic systems, regulatory regimes and market practices also may impact security values and it may take more time to clear and settle trades involving foreign securities.

AllianceBernstein Investments, Inc. is an affiliate of AllianceBernstein L.P., the manager of the portfolio, and is a member of FINRA. AllianceBernstein L.P., is an affiliate of Equitable Financial Life Insurance Company.

The Members Retirement Program is funded by a group variable annuity contract (Contract Form #6059) issued and distributed by Equitable Financial Life Insurance Company (New York, NY). Annuities are long-term financial products designed to help people contribute toward their retirement. Annuities contain certain limitations. For costs and complete details, contact a financial professional.
